

IN THE ABSTRACT

The abstract is amended in the following:

A protect shield-cover for a radiator ~~mainly is~~ utilized to protect a ~~heat-transfer medium-thermal grease coated at the bottom on-of~~ the radiator. The protect shield-cover has a shield-cover body with ~~the-a~~ bottom and lateral sides-~~thereof defining a receiving space for hiding and receiving the radiator.~~ Further, the shield-cover body has a support unit projecting from the inner ~~surface-side~~ of the bottom ~~for putting up the heat transfer medium and enclosing a space~~ accommodating the thermal grease so as to prevent the ~~heat transfer medium-thermal grease~~ from being accidentally touched with foreign substance or and being stained with dust during the radiator being delivered or packed.
